Data bibliography

Temperature 2026 / World

01 Hajime Narukawa — AuthaGraph formulation
2022 formulation; native Cartofreako implementation
Projection and graticules are mathematical constructions. Horizontal periodicity supports the ST2 framing study.
https://doi.org/10.11212/jjca.60.1_1

02 Natural Earth — 1:10m physical vectors
Pinned local vectors used by the 29 October 2026 delivery; not new observations
Land, coastline, minor islands, lakes, rivers, ice and generalized bathymetry. Individual version files and component hashes are in the JSON ledger.

Attribution / use: Public domain

03 NOAA CPC / NOAA PSL — Global Unified Temperature V1.0
2025 complete; 2026 through 28 October
0.5° land TMAX/TMIN analysis aggregated to H3 resolution 3. Same-calendar-day strict records with at least 30 valid history years.
https://psl.noaa.gov/data/gridded/data.cpc.globaltemp.html
Attribution / use: No usage restrictions; NOAA PSL acknowledgment requested.

Measure and interpretation
Days per H3 cell / 2026 through 28 October
11,945 H3 resolution 3 land cells. Strict same-calendar-day maximum and minimum records against 1979–2025, with ≥30 valid history years. 2026 is partial; counts are not a year-on-year warming estimate.

Source ledger
Pinned input files, complete source manifests and checksums:
https://bdekoz.github.io/cartofreako/docs/pages/gallery/setouchi-2028-bibliography.json

Days per H3 cell / 2026 through 28 October

Six Yellow–red count classes. Neutral land: zero; blank: unobserved

11,945 covered cells; NOAA CPC land-temperature analysis.

81+
41–80
21–40
11–20
6–10
1–5

Strict same-calendar-day records; at least 30 years of history.

Blue outlines show record-low days. Partial-year counts are not annual trends.

Antarctica and its terrestrial outlines, ice and country fills are deliberately displaced to the lower left. This is an editorial position; geophysical fields and network observations retain their source coordinates.

AuthaGraph frame shifted horizontally by 10% of image width. All artwork scaled to a 43.5-inch image on the 44-inch sheet.

Anthropocene
New daily high records
