Data bibliography

Network Fiber / World

01 Hajime Narukawa — AuthaGraph formulation
2022 formulation; native Cartofreako implementation
Projection and graticules are mathematical constructions. Horizontal periodicity supports the ST2 framing study.
https://doi.org/10.11212/jjca.60.1_1

02 Natural Earth — 1:10m physical vectors
Pinned local vectors used by the 29 October 2026 delivery; not new observations
Land, coastline, minor islands, lakes, rivers, ice and generalized bathymetry. Individual version files and component hashes are in the JSON ledger.
https://www.naturalearthdata.com/downloads/10m-physical-vectors/
Attribution / use: Public domain

03 TeleGeography — Submarine Cable Map snapshots
2022 and 5 August 2026 snapshots
767 route features: 718 current and 49 unmatched 2022 features; 2,037 cleaned-union landings. Snapshot-only status does not establish construction or decommission.
https://github.com/telegeography/www.submarinecablemap.com
Attribution / use: CC BY-NC-SA 3.0 Unported

04 International Telecommunication Union — public terrestrial fibre
2026-10-29T22:57:37.755Z
37,397 anonymous public WFS features: 35,212 operational, 639 under construction, 1,248 planned and 298 proposed. Microwave and restricted layers excluded; routes are schematic.
https://bbmaps.itu.int/bbmaps/
Attribution / use: ITU public BBmaps source terms; no new redistribution license inferred.

Measure and interpretation
Schematic routes / 2022–2026 snapshots
Submarine cables: Amber (web edition). ITU land fibre: Kelly green

Source ledger
Pinned input files, complete source manifests and checksums:
https://bdekoz.github.io/cartofreako/docs/pages/gallery/setouchi-2028-bibliography.json

Schematic routes / 2022–2026 snapshots

Submarine cables: Amber (web edition). ITU land fibre: Kelly green

718 current + 49 historical route features; 37,397 ITU land features.

Submarine · current ——
Submarine · planned - - - -
Submarine · 2022 only ·····
Land · operational ——
Land · construction - - - -
Land · planned/proposed ·····

2,037 cleaned-union landings. Routes are not surveyed locations.

Snapshot membership does not establish construction or decommission.

TeleGeography CC BY-NC-SA 3.0; ITU public BBmaps, 29 October 2026.

Antarctica and its terrestrial outlines, ice and country fills are deliberately displaced to the lower left. This is an editorial position; geophysical fields and network observations retain their source coordinates.

AuthaGraph frame shifted horizontally by 10% of image width. All artwork scaled to a 43.5-inch image on the 44-inch sheet.

Printed route stroke: 0.494318 pt at 75% opacity (0.5 pt before proportional reduction).
