Data bibliography

Water / World

01 Hajime Narukawa — AuthaGraph formulation
2022 formulation; native Cartofreako implementation
Projection and graticules are mathematical constructions. Horizontal periodicity supports the ST2 framing study.
https://doi.org/10.11212/jjca.60.1_1

02 Natural Earth — 1:10m physical vectors
Pinned local vectors used by the 29 October 2026 delivery; not new observations
Land, coastline, minor islands, lakes, rivers, ice and generalized bathymetry. Individual version files and component hashes are in the JSON ledger.

Attribution / use: Public domain

Measure and interpretation

Source ledger
Pinned input files, complete source manifests and checksums:
https://bdekoz.github.io/cartofreako/docs/pages/gallery/setouchi-2028-bibliography.json

Natural Earth physical vectors in the current checkout; bathymetry is generalized, not a navigation chart.

Antarctica and its terrestrial outlines, ice and country fills are deliberately displaced to the lower left. This is an editorial position; geophysical fields and network observations retain their source coordinates.

AuthaGraph frame shifted horizontally by 10% of image width. All artwork scaled to a 43.5-inch image on the 44-inch sheet.

Ocean-colored backing closes the former Antarctic land void. This backing is editorial, not measured depth; subsea contours retain their source coordinates.
