# LongPMInd v2: modeled annual particulate concentrations, 2022

Native nominal 10 km grid; calendar-day-weighted monthly means require 12 finite, nonnegative months.
22 negative PM10 cell-months are masked and audited. Blank cells are missing; no 2025/2026 observation gap filling.
Source: LongPMInd v2, DOI 10.5281/zenodo.14557027 (CC BY 4.0). Coastline: Natural Earth.
Concentration units are documented in the paper; the NetCDF pollutant variables omit a units attribute. Independent validation is pending.
