Unofficial Starlink Global Gateways & PoPs

User-supplied KML: starlink-global-gateways-pops.20261103.kml.
780 features: 656 points and 124 line strings. The durable KML-to-GeoJSON conversion retains source metadata and geometry.
The supplied file does not specify a license or author. Its title is credited without attributing it to SpaceX.

Natural Earth / terrestrial context

Natural Earth 1:10m physical land. Public-domain cartographic data.
https://www.naturalearthdata.com/downloads/10m-physical-vectors/10m-land/

Cartography and processing / Cartofreako

Setouchi ST2 separate sheets, proportional 43.5-inch image and cyclic AuthaGraph frame. Atkinson Hyperlegible typography.
https://bdekoz.github.io/cartofreako/docs/pages/projections/authagraph/bibliography.html

MSP speculation 2 / Olive graphite

Metallic glossy paper / Epson Stylus Pro 9000 / cyan and light magenta reported low.
Green-biased neutrals respond to the reported violet gray cast. Dark backgrounds follow the supplied print observation.
Unmeasured color study. The saved recipe does not predict ink-channel output or simulate metallic reflection.

Starlink gateways and PoPs / 3 November 2026

780 source placemarks / 656 points and 124 lines

Gateway / PoP record position

Supplied link geometry

Source line placemarks also retain their representative position marker.

The source is an unofficial infrastructure collection. Feature descriptions, folders, styles and original KML are preserved in the conversion.

AuthaGraph cyclic move: +4.35 printed inches. Antarctic land is deliberately displaced to the lower left; infrastructure retains source coordinates.
