Heat, Salt, Water

E3 · Exhibition · Utazu / near the town’s salt-making history · Autumn 2028

A small atlas puts land temperature, water, food, fisheries and oil refining beside one another. The installation invites comparison of systems while making their different units and time periods visible.

Why here

Utazu’s salt-making history offers a concrete entry into energy, evaporation and labour. Residents can correct the exhibition’s questions before the final labels are printed.

Proposed work. Site, partners and production budget remain subject to review.

The visitor experience

Heat, Salt, Water

1. Begin with the water plate and a short account of the host’s chosen local history.

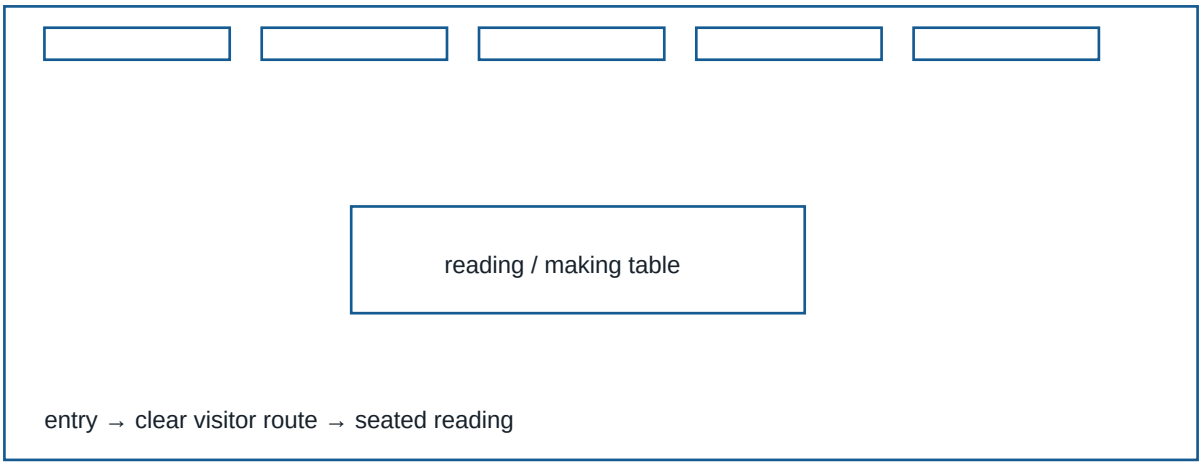

2. Read the temperature map as record-day counts, not as a forecast of island weather.

3. Compare food and fisheries statistics with refinery throughput. A caption explains what each measure can and cannot say about the islands.

Space and materials

Indoor room around 6 × 6 m; five paired panels; one reading table; no process equipment or water installation.

Ten full-size prints; modular rails; source cards; tactile sample of folded paper. No extraction, salt production demonstration or environmental sensing is proposed.

Concept layout only. Dimensions and circulation must be checked in the chosen room; this is not a measured site plan.

Works and production estimate

Heat, Salt, Water

Works are selected from the regenerated atlas. Each has a world master and a Japan companion. Study prints use smaller sheets; all masters remain available at full print size.

Planning allowance	JPY
Prints and mounting	400,000
Artist development	450,000
Local consultation and host fees	220,000
Translation and access	170,000
Installation and freight	260,000
Travel and accommodation	220,000
Contingency	230,000
Total	1,950,000

These are planning allowances, not supplier quotations. They include the stated travel/access items and contingency. No subsidy or host contribution is committed. Any tax, fee or site requirement absent from a supplier quote must fit within the total or trigger revision.

Making the work

Heat, Salt, Water

Stage	Proposed timing
Confirm host, room and local questions	After selection; early 2027
Co-design and physical sample	Mid to late 2027
Confirm permissions, costs and access	At least 12 weeks before opening
Refresh labels and produce final prints	6–8 weeks before opening
Install, test and hand over care guide	Before the chosen 2028 season
Remove, return and archive by agreement	After the season

Human review before production

Agree the local historical account and credit contributors. Have a reader check that national statistics are not presented as measurements of Utazu.
