Shared Sea Atlas

Setouchi Triennale 2028 · recommended exhibition concept · application draft

Executive Summary

Develop Shared Sea Atlas for an agreed indoor room on Awashima in autumn 2028. Six pairs of maps connect the island’s maritime history to land, water, cables, atmosphere, oil refining and heat. A paper table lets residents and visitors choose what questions the maps should answer.

The proposed production allowance is JPY 2,050,000. The work uses repairable displays and needs no internet connection. Begin with a physical print sample and a conversation with a local host before fixing the final map selection.

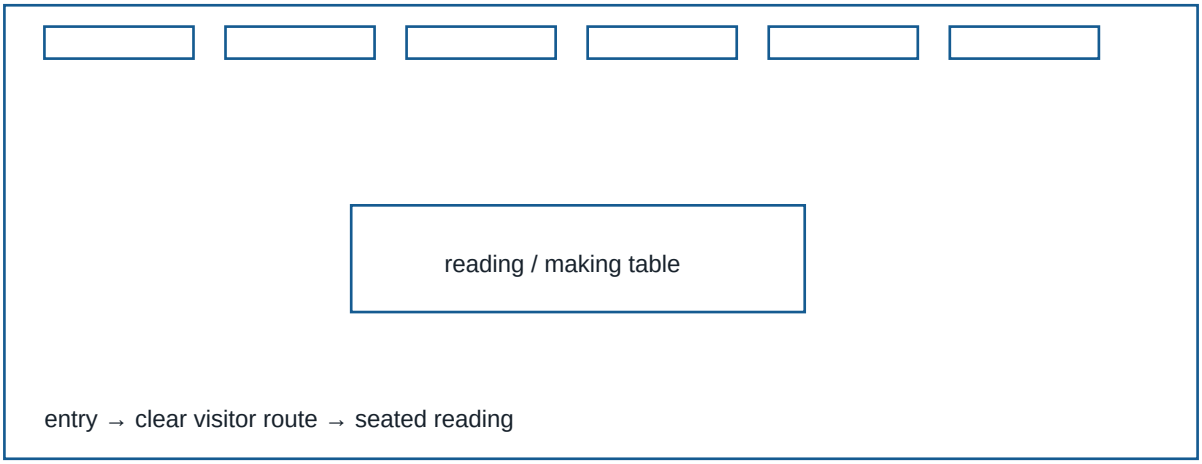

Draft status: concept and production plan prepared. Applicant identity, CV, prior-work selection, host agreement, translation and final costs require human review. This packet has eight A4 pages; reserve up to two more for verified CV and prior work.

A place to read the sea

Site hypothesis: Awashima; no venue is booked

Awashima’s shipping history gives the work a local starting point. The Maritime Memorial Hall or another agreed indoor room is a candidate, not a booked venue. The work asks residents which routes and materials deserve attention.

One indoor room, approximately 6 × 8 m; at least 8 m of usable wall; six paired panels and one 1.8 × 0.8 m table.

Concept layout only. Dimensions and circulation must be checked in the chosen room; this is not a measured site plan.

What the installation needs

A dry indoor room with controllable glare, an agreed hanging method and clear circulation. Provide a seated reading copy of every wall caption. A host should be able to replace a damaged sheet without specialist tools.

The proposed yellow locator marks a conceptual Setouchi reference at 34.45 N, 133.99 E. It is not a marker of a confirmed venue.

Six pairs, two scales

Twelve full-size prints plus a reading table

Pair	What visitors can ask
Earth / Water	Where does this sea sit within the world?
Network Fiber	Which routes carry information across oceans?
Atmosphere	What can a dated satellite observation show?
Refinery throughput	Where is crude processed, and what is missing?
Temperature	Where did land-temperature records occur?

Each world print is 44 × 19.052559 in (1,117.6 × 483.9 mm). A Japan companion has the same sheet size. SVG and PDF are vector masters; PNGs are exported at 300 dpi. Country statistics are not measurements of individual islands.

Petroleum additions are available for the reading table: EIA country production, all OPEC workbook evidence, and Brazilian/Canadian national series. Production, throughput and projections remain distinct.

Make room for local questions

Participation is optional and the host helps shape the work

1. Start with Earth and Water. Find Japan without placing it at the centre of the world.

2. Compare six world/Japan pairs: land, water, cables, atmosphere, refinery throughput and temperature.

3. At a seated table, add an anonymous question or draw a route that matters to island life. Visitors may take their contribution home.

Before the final edition

Pay a local collaborator to review the subject choices, labels and visitor prompts. Commission any local account with agreed credit and use. Avoid asking residents to validate every global dataset; their contribution is to the questions and the local interpretation.

A related event

Fold a World, Read an Island (V1) can be proposed separately or included after its costs and staffing are agreed. Two 90-minute sessions for up to 20 people each use A3 paper maps and a no-cut alternative. Do not assume this event is funded within E1’s budget.

Care and access

Use large-print seated copies, plain Japanese/English labels, a stable table and reachable paper materials. Ask for consent before photographing participants. No account, personal profile or live tracking is needed.

A workable production sequence

Timing to be agreed after selection

When	Work and decision
Application stage	Choose plan(s); verify applicant details, deadline and final packet.
Early 2027	Agree host, candidate room, access and collaboration fees.
Mid 2027	Review a full-size print sample and draft Japanese labels.
Late 2027	Measure the room; confirm hanging, packing, freight and quotations.
12 weeks before opening	Approve final scope, budget and installation method.
6–8 weeks before opening	Refresh selected data and captions; make final prints and spares.
Installation week	Mount, check glare/legibility and hand over a simple care guide.
After autumn 2028	Remove the work and return or archive contributions as agreed.

Autumn dates in the supplied 2028 call: 29 September–12 November. Awashima is in the autumn island group. Check the final festival and venue schedule before booking travel.

Production allowance

JPY; planning assumptions, not quotations

Item	JPY
Printing and mounting	420,000
Reusable display and table	220,000
Artist preparation and local co-design	450,000
Translation and accessible labels	180,000
Packing, freight and local travel	210,000
Installation and removal labour	180,000
Travel and accommodation allowance	180,000
Contingency	210,000
Total	2,050,000

The call describes production support of approximately JPY 2.5 million per selected work, subject to agreement. No support is assured. Travel and accommodation must be handled within the approved amount; the draft includes a modest allowance that needs quotations.

No confirmed rent, customs charge or special wall treatment is assumed. If the actual site requires one, revise the design or budget before fabrication. E1 can reduce print count while retaining world/Japan pairs.

Review before submission

The exploration catalogs are separate from the application packet

Choose up to three plans. E1 is the recommended exhibition; V1 is the lowest-equipment event; I1 is the simplest independent installation. Do not submit all nine options as one plan.

The official page checked on 29 October 2026 states an extended deadline of 2 November 2026 at 10:00 JST (1 November at 17:00 America/Los_Angeles). Recheck before payment and upload.

The proposal and reference materials must fit within ten A4 pages per plan. This draft uses eight; add no more than two pages of verified CV and prior work, or shorten the draft.

Confirm applicant name, contact details, biography, copyright credits and selected previous works. No biography, collaborators or venue commitments have been invented.

Review Japanese language, access, source attribution, production costs and the host relationship. Obtain actual permissions before fabrication or public programming.

The call’s application fee is JPY 1,500 per plan. A human must verify the fee instructions, pay if proceeding, include proof and submit. Nothing has been paid, sent or published by this production run.

References and limits

Sources to retain with the application working files

Official call: https://setouchi-artfest.jp/en/proposals (checked 29 October 2026).

Supplied en_ApplicationGuidelines2028.pdf and en_Report_On-Site_Tour.pdf, assets.static/setouchi-triennale. Site descriptions are reference material, not venue agreements.

Supplied 20261021 cartofreako freakout.pdf. Themes and possible speakers are leads for discussion; no participation has been confirmed.

Maps: current Cartofreako and izzi code. Observation periods vary by plate. See sources/generation-plan.json, the petroleum source explorer and the source annex.

What the maps support

The atlas contains 38 world plates and 38 Japan companions, including three petroleum additions. Earth and water are geographic base maps. Network inventories are dated snapshots. Swarm points describe one media-distribution dataset. Celestial companions use Setouchi observer calculations or explicit sky context, because a geographic crop is undefined.

Temperature observations run through 28 October 2026. Atmosphere layers have different acquisition dates. Particulate and some infrastructure layers retain the repository’s earlier source snapshots; their dates remain visible. These plates are studies, not live forecasts or local pollution measurements.

OPEC World Oil Outlook 2026 is an outlook, not the Annual Statistical Bulletin. Its future values remain projections. EIA liquids include several petroleum and other-liquid components. UNSD refinery throughput remains in thousand metric tonnes; no unobserved density conversion is used.

See sources/data-quality.md and sources/petroleum-explorer.html for source coverage. The human review list is appended to docs/development/20261029_setouchi_triennale_explore.md.
