JAPAN / CORAL REEF / HONEYCOMB

WRI 2011 historical baseline / AuthaGraph enlargement / display groups, not reef footprints

- Low
- Medium
- High
- Very high

Source: 0.25 degree presence grid derived from reef polygons.

Each original grid cell retains its highest threat class.

Source grid-cell count is not an area measurement.

Groups show local class composition; labels describe the display.

No present-day reef condition is inferred from the 2011 baseline.

Japan coastline: 1 pt. Empty areas have no mapped source cells.

PROTOTYPE / honeycomb / Compare the global and Japan views before final exhibition selection.
